

JEVAN BHATTI

Vancouver, BC, Canada | gurjevanbhatti@gmail.com | +1(778)-929-6638 | [Github](#) | [LinkedIn](#)

Technical Skills

Languages: Python, R, C, C++, JavaScript, HTML, CSS, Java, TypeScript

Frameworks/Libraries: Spring Boot, React, Node.js, Express, TensorFlow, NumPy, Pandas, PyTorch

Tools/Databases: AWS, Azure, SQL, MongoDB, Docker, Postman, CI/CD, Git, GitHub

Experience

Meta | *Major League Hacking*

September 2025 – December 2025

Production Engineer

- Engineered a **production-ready Flask & MySQL** web application template, establishing a reusable, scalable architecture for deploying secure environments.
- Architected the deployment pipeline on a DigitalOcean VPS, securing traffic with SSL/HTTPS, and utilizing **Docker** for consistent containerized isolation.
- Automated system recovery and deployment workflows using **CI/CD pipelines** to ensure high availability and reliable delivery of application updates.
- Collaborated with Meta Engineers in an **Agile environment** to integrate **Prometheus** and **Grafana**, establishing real-time system visualization and container monitoring for the deployment environment.
- Achieved **90% code coverage** across the open-source repository by authoring **20+ unit** and **integration tests**, optimizing database queries to execute in under **2 milliseconds**.

Amazon – SFU X AWS Collaboration

May 2024 – September 2024

Student Software Developer

- Developed a **Spring Boot** service in collaboration with the **AWS Solution Architect Team**, optimizing cross-region performance and reducing infrastructure latency by up to **85%**.
- Designed and implemented a **serverless, distributed architecture** by deploying **Lambdas** across **30+ AWS regions** using **CDK**, efficiently managing up to **330,000 client requests per second** while ensuring performance and availability.
- Developed a **RAG chatbot** with **AWS Bedrock + Docker**, enabling real-time retrieval of region trends, service availability, and incident reports; resolved **90%** of user issues and reduced QA costs by **thousands per month**.
- Implemented a multi-region latency visualization feature using **AWS API Gateway** and **DynamoDB**, enabling trend analysis and performance benchmarking, improving decision-making for optimizing architecture.
- Conducted end-to-end API **testing** with **Postman**, ensuring cross-region performance stability and reliability of the system.

Projects

RED SEA – 2nd place winner, 2024 cmd-f hackathon

April 2024

Python, JavaScript, HTML, CSS, PostgreSQL, Node.js, MAPBOX API

- Spearheaded the development of an AI-powered web app that predicts the safest evacuation routes for refugees fleeing war in Palestine, securing **2nd place** at **Canada's largest hackathon** for women with **300+** participants.
- Leveraged **Amazon Aurora** and **PostgreSQL** to optimize the querying process, efficiently storing **15,000 records** of war casualties and geospatial data and achieving a rapid response time of **0.25 milliseconds** during peak usage.

Instagram Creators Platform

February 2024

Python, SQL, Pandas, Numpy, PostgreSQL, Github

- Led development of an engagement analytics blueprint with **Meta Digital Creators** to identify drivers of high-performing content, analyzing **50M+ views** from **1M+ posts**.
- Developed a scalable data system handling **5K+ daily interactions** with **>99% accuracy**, **cutting manual analysis time by 40%** and enabling faster decision-making.
- Collaborated in a **SCRUM environment** with **Meta Digital Creators** to source and prepare raw engagement data, powering analytics that informed growth strategies for **25K+ followers**.

Education

Georgia Institute of Technology, Atlanta, GA

January 2027

Masters of Science - Data Science

Simon Fraser University, Vancouver, BC

September 2022 – May 2026

Bachelor of Science – Data Science
